The burndown chart for this sprint shows the progress of work completion over time. The blue shaded area represents the remaining work, which increased before sharply declining by the sprint's end. However, two user stories were not completed, leaving 6 story points unfinished.

Compared to the previous sprint, the actual velocity may have fluctuated due to the additional work added during the sprint. The velocity remained constant due to the team's ability to adapt and complete almost all work on time.

Burndown Chart from Trello

The Trello burndown chart follows the same pattern, with a steady workflow and a final drop in remaining work near the sprint's end. Despite the two unfinished user stories, both charts reflect an almost complete task execution within the sprint timeframe.

Since both charts align closely, this suggests consistent velocity and effective sprint execution. The team demonstrated good collaboration in maintaining a steady workflow across both tracking platforms.
